| 1   | 644512  | 25/F         | Root Canal Treatment followed by endo crown with 26 | A maxillary first molar (tooth 26) presented with symptomatic irreversible pulpitis requiring root canal treatment. Clinical examination showed absence of palatal wall with 26. Preoperative radiographic examination revealed the presence of a periapical radiolucency and radiolucency involving enamel, dentin and pulp. Careful access cavity modification under magnification enabled identification of three canals. Working length was established using an electronic apex locator and confirmed radiographically. Cleaning and shaping were performed using rotary nickel-titanium instruments with copious sodium hypochlorite irrigation. Following thorough disinfection, all canals were obturated using gutta-percha and sealer. Postoperative radiographs confirmed a well-condensed obturation of all canals, resulting in a successful clinical and radiographic outcome. Once the canals were obturated, composite buildup was done on the palatal wall as well as the pulpal floor and 2 mm pulpal depth was maintained. Putty impression was taken with both arches and sent to lab for preparation of zirconia endocrown. This crown was later cemented |

|   |        |      |                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 2 | 699813 | 20/F | Root Canal Treatment of Radix Entomolaris with 36 | A mandibular first molar (tooth 36) presented with symptomatic irreversible pulpitis requiring root canal treatment. Preoperative radiographic examination revealed the presence of a radix entomolaris, an additional distolingual root, indicating a complex root canal anatomy. Careful access cavity modification under magnification enabled identification of four canal orifices, including the distolingual canal. Working length was established using an electronic apex locator and confirmed radiographically. Cleaning and shaping were performed using rotary nickel-titanium instruments with copious sodium hypochlorite irrigation. Following thorough disinfection, all canals were obturated using gutta-percha and sealer. Postoperative radiographs confirmed a well-condensed obturation of all canals, including the radix entomolaris, resulting in a successful clinical and radiographic outcome. |
| 3 | 668541 | 26/F | Bmp, obturation with 21 under rubber dam          | Periapical cyst with 21 Maxillary central incisor 21 with periapical cyst radiographically. Accessing opening, working length determined , biomechanical preparation done, calcium hydroxide ,metapex dressings given , triple antibiotic paste intracanal medicaments placed , 3 months follow up . absence of weeping canals .Obtutation done with 21 under rubber dam . Patient recalled for follow up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
